**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Breyvogel, et al. (6,659,502).

Breyvogel teaches a head-protecting airbag mountable on a vehicle normally folded and housed in an upper edge of windows inside the vehicle, the airbag comprises a gas admissive portion 9, 10 inflatable with inflation gas from inflator and a non-admissive portion 11 admitting no inflation gas, the gas admissive portion comprising a shielding portion 12 for covering the vehicle's interior side of the windows upon deployment of the airbag, the shielding portion comprises a plurality of vertical

chambers, each of the vertical chambers being disposed vertically upon deployment of the airbag; and at least one horizontal chamber, the horizontal chamber being disposed along longitudinal direction of the vehicle upon deployment of the airbag, the horizontal chamber is located between at least one pair of the vertical chambers neighboring each other such that the horizontal chamber communicates the pair of the vertical chambers in the vicinity of vertically middle position of the vertical chambers, as shown in figure 4. One of the pair of the vertical chambers deploys in an area with which an object interferes upon deployment of the airbag, the shielding portion further comprises a second horizontal chamber located below the horizontal chamber as set forth in claim 1, the second horizontal chamber being disposed along longitudinal direction of the vehicle, and the second horizontal chamber is closed at a side proximate to the vertical chamber in which the object is located, and is opened at the other side proximate to the other vertical chamber. The horizontal chamber is located at upper level than the vertically middle position of the vertical chambers that interpose the horizontal chamber.
